Amend the paragraph starting on page 6, at line 1:

--The data source routine 124 then performs (at 322) a directory list command on the server 110 in which the common set of data files 24 are kept. The output of the directory command is routed to a file FILE.TXT. The file FILE.TXT is then opened and a search is performed (at 324) to find file names that contain the string FString.--

IN THE CLAIMS:

Cancel claims 15 and 16, without prejudice.

Amend the following claims:

1   1.   (Amended) A method of performing a test, comprising:

2   performing a first test with a first test system;

3   performing a second test with a second test system:

4   in each of the first and second test systems, receiving plural parameters;

5   in each of the first and second test systems, identifying a file name of a

6   first data file to use in each of the first and second tests based on the plural parameter;

7   and

8   in each of the first and second test systems, using the first data file in

9   performing the respective one of the first and second tests.

1   14.   (Amended) A test system comprising:

2   an interface to a network coupled to a storage unit containing a data file

3   for use in a test;

4   a control unit;

5   a routine executable on the control unit to receive a first parameter and a

6   second parameter and to combine the first and second parameters to form a string,

7   the routine to identify a file name of the data file based on the string; and

8   a test module executable on the control unit to perform the test using the

9   data file.

1   18.   (Amended) The test system of claim 14, wherein the test module is

2   executable on the control unit to perform a test of a database coupled to the network, the

3   second parameter representing the database.

1   22.   (Amended) An article comprising at least one storage medium containing

2   instructions that when executed cause a system to:

3   combine a first parameter and a second parameter to form a string;

4   access a storage unit over a network, the storage unit containing plural

5   data files; and

6   identify one of the data files having a name containing the string for using

7   in a test procedure.

Add the following claims:

1   29.   (New) The method of claim 1, further comprising:

2   combining the plural parameters to form a string; and

3   locating the first data file by finding the file name containing the string.

               30.   (New) The method of claim 6, further comprising locating the test file

having the file name.

1   31.   (New) The test system of claim 14, the routine to locate the data file by

2   finding the file name containing the string.

1   32.   (New) The method of claim 23, wherein searching the predetermined

2   directory comprises searching the predetermined directory to find the test file having a

3   name containing the string.
